

Andrew Sklyarov

Senior InterSystems IRIS Developer (ObjectScript) | Integration & Interoperability
Hua Hin, Thailand (GMT+7) | +66 96 820 2307 | iris79119760730@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

InterSystems IRIS Interoperability expert with 12+ years of experience building high-load, mission-critical enterprise integrations. Built an IRIS-based ESB connecting 50+ systems: SAP S/4HANA, SAP Commerce Cloud, SAP Marketing, 1C ERP, Oracle Siebel CRM, POS, DWH, WMS, BI, e-commerce marketplaces, and more. Developed real-time streaming pipelines on IRIS and Apache Kafka processing up to 7,000 RPS. Extensive backend development in Caché ObjectScript: REST APIs from OpenAPI specs to unit tests, data modeling, and business logic for retail, wagering, and web platforms; proficient in Java and Python. Introduced AI agents, an IRIS MCP server, and custom agent skills into team development workflows. Also experienced in software architecture and team leadership, IRIS administration and high availability, SQL performance tuning, CI/CD, Docker, and mobile development.

SKILLS

Platform: InterSystems IRIS, IRIS for Health, Caché, Ensemble, Interoperability, HealthShare, Health Connect

Languages & Tools: ObjectScript, MUMPS, SQL, Java, Python, REST/SOAP, Apache Kafka, Docker, AI Agents/MCP

PROFESSIONAL EXPERIENCE

InterSystems Corp | Software Company

London, UK (Remote)

Senior Backend Developer (part-time)

Dec 2025 - Present

Backend development for the InterSystems Developer Community ecosystem (Open Exchange, Global Masters, Startup Hub and others), using InterSystems IRIS as the API and database platform.

- Designed an **OpenAPI specification for 120+ endpoints** with validation of all incoming requests and full unit-test coverage (%UnitTest, Embedded Python), which streamlined collaboration between the frontend and backend teams
- Made the Global Masters home page **load 40%+ faster** by replacing multiple database queries with a single query and post-processing in the controller
- Built an **email subscription subsystem**: user preferences, an Interoperability flow with guaranteed delivery, Jinja-based templates and mailing campaigns, giving current and future web projects a reusable, reliable channel to the community and customers
- Developed a **data versioning module** that records what, when and how data was changed in the database, improving data consistency and access control
- Introduced **AI-driven development** into the team's workflow: AI agents connected to IRIS through an **MCP server** and custom agent skills for development, testing, code review and documentation

Tabcorp | Wagering & Gaming Company

Melbourne, Australia (Remote)

Senior Software Engineer (fixed-term contract, part-time)

Jan 2025 - Dec 2025

Developed a high-load application on InterSystems IRIS 2024 that serves as an integration layer and a report generator for state regulators (ObjectScript, Python).

- Built **Apache Kafka ingestion** of raw data at **up to 7,000 RPS**
- Implemented a **streaming data pipeline**: Protobuf decoding, data normalization, conversion to Avro and publishing to downstream Kafka clusters
- Designed and implemented the **REST API** on the IRIS side and integrated with the **IRIS Adaptive Analytics** semantic layer
- Covered the code with unit tests and wrote the project documentation

Aroma Tech | Omni-Channel Retail Company

Saint Petersburg, Russia (Remote)

Senior Software Engineer & Software Architect

Feb 2013 - Present

Built one of the largest InterSystems IRIS ESB implementations worldwide, connecting **50+ systems** into a single ecosystem on a mirrored IRIS cluster. The codebase is mainly ObjectScript, plus Java and Python, and includes **800+ data flows**, API endpoints and clients for external APIs. The platform handles **up to 500 RPS** of inbound requests and **~3 TB of messages weekly**.

Key projects, as Developer, Team Lead and Software Architect:

- Loyalty program processing** (SOAP API): 1,000+ POS terminals, up to 400 RPS, 24/7 availability; Oracle Siebel CRM backend, Set Retail 10 frontend, InterSystems Ensemble as the transport layer
- SAP integration** (S/4HANA, Commerce Cloud, Marketing): developed an IDoc server and client on SAP JCo (Java) and built data flows over SOAP, REST and JDBC

- **Migration from Ensemble/Caché to IRIS 2024:** deployed mirrored failover, achieving zero message loss and 99.9% interface availability
- **IRIS ESB framework:** guaranteed message delivery, message validation, a flexible API for any message type, centralized monitoring and alerting
- **Marketplace integrations** (Amazon, Ozon, Wildberries, Sbermarket and others) via JSON over REST APIs
- **Engineering practices:** introduced GitHub Flow, code review, unit testing with Postman mock servers and automated deployment for ObjectScript development, significantly reducing production defects
- **Leadership & operations:** lead a team of up to 3 engineers (mentoring, training, code reviews). Responsible for IRIS administration, troubleshooting and performance optimization

EDUCATION

Bachelor's degree in Information Technology | Platov South-Russian State Polytechnic University Russia

ACHIEVEMENTS & ADDITIONAL INFORMATION

- 3rd place, InterSystems Technical Article Contest 2026
- Winner, InterSystems Developer Tools Contest 2025
- Active contributor to the InterSystems Developer Community (technical articles, Open Exchange applications)
- Former 1C:Enterprise developer, ranked in the TOP 10 on the 1C community portal
- Indie game developer: games featured on Google Play and the App Store, 27M+ downloads
- Languages: English (Professional working proficiency), Russian (Native)
- Availability: flexible overlap with EU hours
